PROJECT DESCRIPTION

Please provide your project description and use the following structure. The project description should:

- provide the state of the art,
- specify the expected project outputs/impacts and relevance to the call scope/topics,
- provide information of the workflow and the linkage of work packages between the project partners.

The project should be in line with the requirements stated in the call text. The space is limited to 25,000 characters including spaces. Implementation of up to six graphics/images is allowed and possible (allowed formats are jpg, png or gif, max. resolution 600x600px, max. file size 2MB). No additional documents will be considered.

Within menu FIGURES a detailed instruction will help you on how to properly implement figures within this section.

EVALUATORS

You may name a maximum of two experts who should not review your proposal because of conflict of interest. Please enter the full name(s), affiliation (research institution, organisation) and reason for refusal of the expert(s).

DATA MANAGEMENT PLAN

Description

Data management is an essential component to the success of projects using systems/synthetic biology approaches and/or tools in bioinformatics. Representatives from academia, industry, funding agencies, and scholarly publishers designed and jointly endorsed a concise and measurable set of principles referred to as FAIR Data Principles with the intention to provide a guideline for reusability of data holdings. Four foundational principles – **F**indability, **A**ccessibility, **I**nteroperability and **R**eusability– are a necessity of data management. The EC published Guidelines on FAIR Data Management in Horizon 2020 and Horizon Europe.

All applicants must include a maximum one page Data Management Plan. This plan should mainly detail how the project partners will manage the research data generated and/or collected during the project, in particular addressing the following issues:

- What types of data will the project generate/collect?
- What standards will be used?
- How will this data be exploited and/or shared/made accessible for verification and reuse?

If data cannot be made available, explain why.

- How will this data be curated and preserved?
- How will the costs for data curation and preservation be covered?

Additional guidance on data management, including a template for a Data Management Plan, is given in the guidelines on data management in the Horizon 2020 Online Manual, available at:https://ec.europa.eu/research/participants/docs/h2020-funding-guide/cross-cutting-issues/open-access-data-management/data-management_en.htm

COMMUNICATION AND DISSEMINATION PLAN

Description

Plans for communication and dissemination of the project and its results have to be described and will be taken into account in the evaluation with the aim to increase the quality of the implementation and to reach higher impact (see chapter 7.2.1). This should be organised in the form of various communication routes (both national and international) such as scientific papers, posters, presentations, a course or training material, web based tools, workshops as well as stakeholder involvement or direct intervention directed towards end users.

Appropriate resources should be dedicated for the communication and dissemination activities. To enhance dissemination of the project results, additionally or in parallel to the own project meetings, all project coordinators should calculate costs for the attendance of two mandatory joint network meetings (mid-term- and end-term meeting) in their project plan.

Please consider that all project partners must give proper reference to the FACCE-JPI and SusCrop in any documentation published (in written, oral or electronic form).

There are possibilities to get support and advice for your plan for communication, dissemination and capacity building, please consider: The EC guidelines on "[Communication EU research and innovation guidance for project participants](#)".
